

Business Problem Statement

Customer Shopping Behavior Analysis

Problem Statement

A leading retail company wants to better understand its customers' shopping behavior in order to improve sales, customer satisfaction, and long-term loyalty. The management team has noticed changes in purchasing patterns across demographics, product categories, and sales channels.

They are particularly interested in uncovering which factors — such as discounts, reviews, seasons, or payment preferences — drive consumer decisions and repeat purchases.

"How can the company leverage consumer shopping data to identify trends, improve customer engagement, and optimize marketing and product strategies?"

Issues to be Solved

- How does revenue differ between male and female customers, and which demographic drives higher spending?
- Which customers use discounts but still spend above the average — and what does this reveal about discount effectiveness?
- Which products receive the highest customer review ratings, and how can this inform product promotion?
- Does the choice of shipping type (Standard vs. Express) correlate with higher purchase amounts?
- Do subscribed customers spend more than non-subscribers, and is the subscription program delivering value?
- Which products are most heavily dependent on discounts to drive sales, and does this indicate a pricing problem?
- How are customers distributed across New, Returning, and Loyal segments — and where should retention efforts focus?
- What are the top-selling products within each category, and how should inventory and marketing be aligned?
- Are repeat buyers (more than 5 purchases) also subscribing — or is there a missed conversion opportunity?
- Which age groups contribute the most revenue, and how should marketing be targeted accordingly?
